HOW TO IMPROVE YOUR ENERGY EFFICIENCY

Attic Insulation

Use a ruler to measure how much insulation you have in the attic area. If you have less than 12 inches, you may want to consider more. Improving your insulation is one of the most effective ways to reduce energy usage.

Furnace Filters

How often was your furnace filter cleaned or changed in the past year? To ensure your furnace is operating at maximum efficiency, clean or replace your filters frequently. Follow the instructions in your owner's manual.

Florescent Bulbs

Utilize florescent light bulbs when possible; the initial investment translates to long-term energy savings.

HOW TO IMPROVE YOUR ENERGY EFFICIENCY

Water Heater

Locate the EnergyGuide label to determine your water heater's energy efficiency rating. If you can't locate the EnergyGuide label, carefully touch the water heater tank. If the tank is warm to the touch, it probably uses the maximum amount of energy.

Windows

During colder months, cover single-pane windows with a clear plastic film on the inside to prevent cold air from entering your home.
