

# SMOKE TESTING

## **What is Smoke Testing?**

ECU's crew blows odorless, non-toxic smoke into the sewer system and assesses the area for smoke exiting the system.

## **Why Do We Do Smoke Testing?**

Smoke testing allows us to identify leaks or cracks in pipes, broken manholes, and faulty connections. We can then create a plan to address any issues we discover to maintain the integrity of the sewer.

## **Where and When Are We Completing Smoke Testing?**

We will begin smoke testing in Watson Grove the week of January 12. Smoke testing in Watson Grove will take up to two weeks. Following this initial testing, we will share future areas that are planned for smoke testing.
