PREPARATION & PREVENTION FOR THE HAPPIEST HOLIDAY SEASON

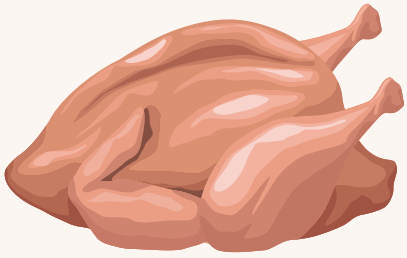
Surge Protectors

Bringing in extra appliances, electronics, or festive decorations? Plug them into surge protectors to keep your circuits happy and your guests safe.

Breaker Overload

Don’t plug more than one high-wattage appliance or device into an outlet to avoid overloading your breakers.



Take Out the Turkey

Plan ahead and let your turkey thaw in the fridge. Plan for 24 hours of thawing for every 4 pounds of turkey, or 6 hours per pound!

Dishwashers for the Win

Scrape all food waste into the trash can and use your dishwasher (if you have one) to save water, energy, money, and time as opposed to handwashing.

Shut the Door

Your front door isn't the only door letting hot air escape! Keep your oven door closed and use your oven light to check food while maintaining temperatures.

Turkey Timing

Coordinate cook times for your sides with your turkey roasting for more efficient preparation.

Leaving Leftovers

Cool leftovers before refrigerating to reduce the energy spent on cooling.

Loading Up on Laundry

More cooking - and more houseguests – can translate to more laundry! Run full loads to reduce the overall number of loads of laundry.

Look for Leaks

Take time now to check for leaks, including faulty toilet flappers, to reduce water waste and expense.
